Asiwaju Tech Blog

1. Introduction

- Tech blog is a website where I share my experience to user on different tech stack and programming terminologies. I write overview about this technology and my experience using them

2. Design and Implementation

- I visited different blogsite to have a conceptual idea on how blog operates, this idea was sketched out which serve as a blue-print for my design.
- Node.js, Express was used for the server- side.
- MogoDB was used to store the user and article.
- Passpot Local, facebook and google strategy was use for authentication and authorization.
- Admin can perform CRUD operation for articles.

3. Conclusions

- Asiwaju tech blog is a website where I share my ideas to user my experience about different programming terminologies.
- There are 2 categories of articles to read, premium article for registered user logged into the system and article for guest user
- Apart from the manual sign up and login, user can also sign in or log in through Facebook and google
